

New solution for your business.

Faster and cheaper
transactions.

Perfectly for
instantpayments.

WHAT IS iTken?

iToken is a decentralized cryptocurrency that promises to make P2P payments faster and cheaper. It provides faster transaction speeds than both other cryptocurrencies. Cheaper price and transactions allow the iTken to be easily adopted by merchants and users.

BACKGROUND

Blockchain technology has changed the way people send funds to each other. The blockchain used in cryptocurrencies is revolutionary in many ways. It solves many problems associated with digital transactions such as double spending and currency reproduction. The use of blockchain also lowers the cost of online transactions while enhancing authenticity and security. However, as most popular cryptocurrencies grew in popularity, it became slower and heavier.

iToken is faster and easier

Most popular cryptocurrencies is harder and slower

Network traffic, for example, of bitcoins is unusually high due to the growing demand for transactions per block.

Block sizes are limited, so this means transactions that exceed the block's capacity get stuck in the queue for confirmation by Bitcoin miners. This queue of unconfirmed transactions is called the Bitcoin mempool. Mempool gets bigger, harder and slower.

The average user has to wait for a confirmation of a transaction for hours and sometimes days. This makes Bitcoin unusable for merchants and day to day transactions. Nobody wants to wait more than 5 minutes, let alone days.

iToken fee is cheaper.

The transaction fees are raging due to several factors. One is the size of the block in Bitcoin's blockchain, which is limiting the number of transactions that can go through at any given time. Most popular other cryptocurrencies network is powered by miners, people and companies who use a tremendous amount of computing power to create new coins.

And when there are too many transactions to process—which currently happens very often—miners will prioritize transactions that pay a higher fee. This is not good for Bitcoin and others. A few dollars (or even a few dozen dollars) per transaction isn't a deal breaker for investors, but for someone who wants to use it as a P2P instrument – which is kind of the point of it in the first place—that's far too expensive.

What does iToken offer?

MUCH FASTER TRANSACTIONS

ITN transactions are confirmed within 1-3 minutes. This makes it much, much faster than other cryptocurrencies that can sometimes take days to arrive. Average blocktime of iToken is 15s while Bitcoin has an average block time of 10 minutes.

LEANER INFRASTRUCTURE – DESIGNED TO BE USED FOR DAILY TRANSACTIONS

iToken runs on Ethereum blockchain and inherits all advantages that come with this modern platform. There is no need to download a blockchain to access or spend your coins.
